

The F20 is Navman's entry level navigation product that will replace the iCN 300 series.

The F20 shares the same concept of simple, straightforward navigation, but with a touch screen and brand new look and feel to the interface. The 'F' prefix stands for Freedom, indicating computer-free set-up and simple operation.

The F20 will offer the customer simple, no-frills navigation at an affordable price. This product will be an excellent offering to customers from many age groups. The simple user interface, with its color-coordinated icon menu will appeal to older users, whilst the design and lower cost will lend itself to a younger market that cannot afford more pricey models.

#### Headline messages:

**Simple to use**

**Great value for money**

**Slim, portable design – fits in your pocket**
